

### ProCom presents a new version of its ITA solution

# Intraday trading made easy

**Aachen, September 25, 2015** – With the new ITA version 2.5, ProCom GmbH (Aachen) presents a tool to enable energy producers, direct marketers and distribution system operators to more easily generate additional profits from intraday trading of flexibilities. The IT solution assists with the monitoring and management of portfolios, provides users with an overview of current exchange movements and price developments, and offers the possibility of trading directly on the EPEX Spot Intraday.

ITA 2.5 thus makes it easier for users in an ever more dynamic market environment to create opportunities for short-term trading from increasing uncertainties arising from imprecise forecasting and volatile prices. To do so, ITA compares day-ahead schedules with intraday production to reveal availabilities. It calculates open positions, taking into consideration completed trades and offers. Simultaneously it delivers suitable timetables and trading suggestions to balance out the open positions, based on current data, availabilities, load and market information. These can easily be transmitted to the exchange in the form of an offer. The ITA market monitor also provides a user-friendly overview of all trading products, order books and price developments in real time. This allows free capacities to be marketed or missing volumes to be procured up to half an hour before delivery.

ITA 2.5 is available immediately. Along with the IT solution, consultancy ProCom offers assistance with process organisation, introduction of the solution and ITA upgrades, as well as training courses and workshops.
